## EXPERTISE

### MANUFACTURING

- Proficient in machine operations.
- Experience in using a number of working tools such as forklifts, TIG welders and drills.
- Knowledge of quality control and inspection procedures.
- Familiar with safety protocols and regulations in manufacturing environments.

### WEB DEVELOPMENT

- Proficient in front-end and back-end development using tools like HTML, CSS, JS, PHP.
- Applied SEO techniques to improve search engine rankings and boost online visibility.
- Modified and optimized existing websites to meet evolving business and user needs.
- Implemented unique web functionalities to enhance site capabilities and user engagement.

## ABOUT

Throughout my career, I have acquired valuable experience in a range of industries, such as manufacturing and marketing. I am dedicated to lifelong learning, consistently pursuing opportunities to enhance my skills, take on new challenges, and achieve personal and professional growth.

I have acquired practical experience in numerous factory positions, beginning with fundamental responsibilities like packing and assembling components. As time went on, I advanced to more complex roles, which involved operating and setting up multiple machines.

Furthermore, I worked in a Quality Assurance (QA) position, where I was tasked with conducting hourly inspections to verify production met specifications and recording the data in a database. My latest role was that of a Coordinator. My duties involved conducting shift handovers, updating daily schedules and rosters, ensuring sufficient staffing in each department to support smooth operations, and following up on emails to stay aligned with daily production objectives.

During my experience in web development, I collaborated closely with marketing agencies, where I was primarily responsible for transforming design concepts into fully functional websites. In addition to building new sites, I maintained and updated existing platforms, developed customized forms to meet client-specific needs, and implemented a variety of tailored web functionalities.

Working with cross-functional teams provided valuable perspectives and allowed me to continuously expand my skill set. Over time, I strengthened my expertise in web design, implemented effective SEO strategies to improve online visibility, and optimized website performance to enhance overall user experience.

## WORK EXPERIENCE

### Manufacturing and Web Development

Here are some points that I have learn during my work experience.

- Manufacturing - Operate and maintain production machinery to ensure smooth production operations.
- Manufacturing - Trained new team members on manufacturing procedures, safety guidelines, and equipment operation.
- Manufacturing - Conducted regular quality inspections to maintain product standards and meet customer expectations.
- Web Development - Problem-solving and troubleshooting when working on somebody elses code.
- Web Development - Worked together with teams from different departments (Design and SEO teams) to identify and solve problems occurring during production.
